Aero Pack Space Cab

The aerodynamic properties of the cab are supported by rounded corners and openings in the corner air deflectors and headlight units to guide the airflow along the cab sides and prevent fouling of the side windows and the area of and below the door handles.

To further optimize the aerodynamics of the tractor, which contributes to low fuel consumption, the Aero Pack provides.

A fixed, aerodynamically shaped body on the cab roof, with an adjustable curved flap at the rear, to match the height between tractor and trailer for an ideal streamline of the roofs.

Practical side collars to cover the gap between cab and trailer, the one at the left-hand side being hinged to give access to the catwalk.

Stylish side skirts that perfectly fit over the wheelarch at the front end. The side skirts have integrated anti-slip catwalk steps at the left-hand side and a side marker light on both sides.
